

Johnson Water Conditioning Presents The: “Airwise Filtration System”

The Airwise Filtration System features the simplest, most economical, and effective way to remove iron, sulfur and manganese from your well water.

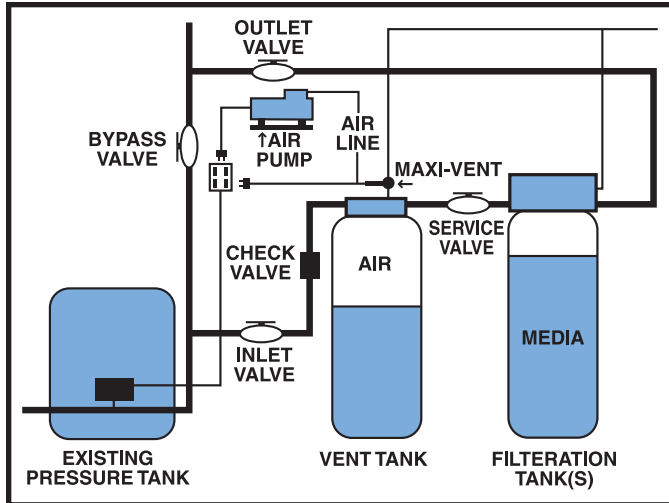

Imagine. No more iron taste. No more sulfur smell. No more yellow clothes. No more corroded pipes. Longer life for your washing machine, dishwasher, hot water heater and water softener.

The Airwise System:

- Requires no chemicals or salt for operation
- Requires no venturis or micronizers
- Removes dissolved and precipitated iron
- Comes with a long-life quality air pump
- Has full 1" porting throughout the system
- Installed with a full safety bypass around the entire system

Model Number	Maximum Service Flow Rate (GPM)	Backwash Flow Rate Required (GPM)
Airwise 100	5.0	5.0
Airwise 120	7.0	8.0
Airwise 130	8.0	10.0
Airwise 260 twin	16.0	10.0

How Does It Work?

The Airwise system use a three-step process:

1. Oxidation
2. Precipitation
3. Filtration

The Airwise system oxidizes water by injecting pressurized air into the water. During the aeration process, oxygen mixes with the iron and hydrogen sulfide, precipitating these undesirable elements.

Unwanted air and gases are expelled through the power-vent allowing maximum air turnover. The final stage of the process is filtration. The water now travels through the filtration tank. The water is now clean, with no odor and tastes great.

The Airwise Filtration System from Johnson Water Conditioning is being recommended by well drilling companies, plumbing contractors and irrigation contractors. It has been called the most reliable and best iron and odor removal system available to the water conditioning industry.
