

Johnson Water Conditioning Presents...

The Autotrol Professional Series Water Conditioners.

Top Quality Water Conditioning System Featuring the Autotrol 255 Valve.

Features:

- 3/4" ports.
- Flow rates to 15.5 gpm.
- Efficient valve design decreases water required for regeneration.
- Made with Noryl corrosion resistant material.
- 256 bypass valve included.
- Available with the all-new Logix time clock or on-demand controller.
- The 255 valve is typically used in residential applications that require average flow rates.

Model Number	Maximum Capacity	Flow (GPM)	Mineral Tank	Brine Tank
255-24,000	24,000	7.5	7x44	14x14x34 or 11x11x34
255-32,000 short	32,000	12.0	10x35	14x14x34 or 11x11x34
255-32,000	32,000	9.0	8x44	14x14x34 or 11x11x34
255-48,000	48,000	12.0	10x44	14x14x34
255-64,000 short	64,000	13.0	12x36	18x33
255-64,000	64,000	12.0	10x54	18x33
255-80,000	80,000	13.0	12x48	18x40

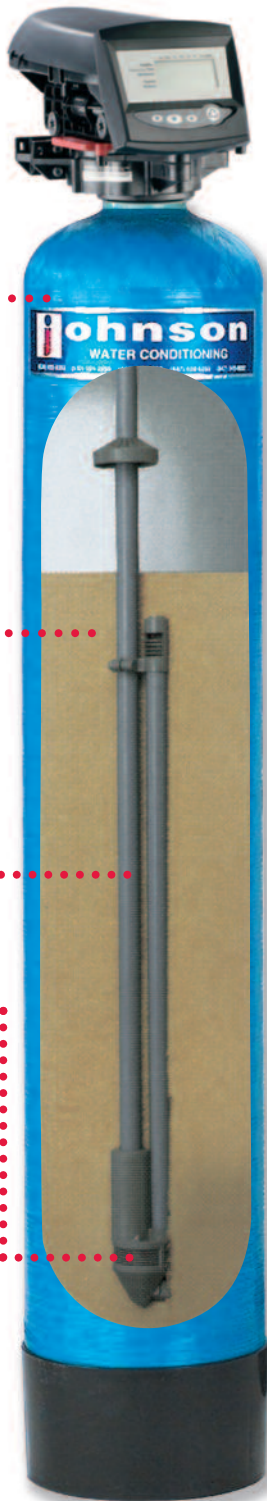

Johnson Water Conditioning brings homeowners the best choice and the logical choice in residential water treatment systems. If you're looking for high performance, high efficiency and dependable operation, we've got the system for you. Our new Logix series controllers for our Autotrol valves set the standard for achieving superior water treatment for you and your family.

The Ultimate Water Treatment System.

We offers a full range of valve controllers to meet all residential water-conditioning applications.

Designed for a lifetime of service. High-strength inner liner surrounded by a study filament-wound exterior. Tested and certified by the National Sanitation Foundation.

High capacity resin provides maximum softening capacity and is backed by a lifetime warranty.

Full flow 1" internal piping on every model.

The Turbulator, invented by Mr. Johnson, uses a water-stream compression device which stirs up the softening media during the backwash cycle. Small particles of dirt and iron are scrubbed from the beads and flow to the drain. This increases iron removal and will enhance the softeners efficiency.

Logix Series 740 Time Clock

- Simple, economic electronic time clock operation.
- New efficient 7-cycle regeneration sequence.
- 8-hour power back-up will maintain settings during a power failure.
- Manual override regeneration provides extra soft-water regeneration exactly when you need it.
- Safe 12-volt operation uses only \$1.00 in electricity per year.
- No battery back-up required.

Logix Series 760 On-Demand

- Simple, economic electronic on-demand operation.
- Smart 28 day variable reserve feature learns your family's water usage and adjusts to demand.
- Meters your water use and regenerates only when needed.
- Features "soft-water remaining" display.
- New efficient 7-cycle regeneration sequence.
- Safe 12-volt operation uses only \$1.00 in electricity per year.
- No battery back-up required.

Safety Float Valve

Tough Corrosion Proof Construction For A Lifetime Of Use

100% LIFETIME PARTS WARRANTY
